

## Before Playing:

1. Run off four sheets of the pennies cards.
2. Cut them up into cards.

## Directions:

1. Take the cards and make two stacks.
2. The first person turns up both cards and decides if they can make $\$ .05$ with the pair of cards.
3. If they can they pick up the pair of cards and put them in their pile. If they can't they place one card over so the card can still be used.
4. The next person turns over one card. The game is done when all the cards are used up or there cannot be any other pairs made.
The person with the most cards wins!
