

Making Numbers Fun

Before Playing:

1. Run off the Making Numbers Fun game.
2. Run off and cut up the numbers.

Directions:

1. One person makes a number by putting the number cards in the thousands, tens, hundreds, and ones place.
2. The other person has to read the number correctly and then make a second number that is higher (or you could play smaller) than the first number.
3. Another way to play is to have one person state a number and then the other person has to make the number.
4. Another game is to make two numbers and then each person gets to ask a place value question. (Example: 3,247 and 8,915 What number has 900 in the Hundreds place?)
